Reflux Desktop Client. Update v3.7.0.9

Version Update Importance: NOT IMPORTANT

Bug Fixes:

1. The version number in the program used to read inaccurately. This has been fixed so that the version number displayed on the main screen is correct.
    - It also allows us to check your versions remotely to diagnose any further bugs.

Note: After the update, remember to select your printer again or your orders may not print. From Reflux, go to "File" =>"Change Printer" then select your printer from the list and click "save"
