

Reflux Desktop Client. Update v3.9.0.11

Version Update Importance: **LOW PRIORITY**

1. Improved order viewing for those using receipt printers. Now you have scrollbars to look up and down the order. This helps shops who have a long order where the popup did not fit to screen thus some of the order could not be seen.

This is a free upgrade and will roll out automatically next time you start Reflux. Stay updated with our new features by subscribing to the RSS feed.

Note: After the update, remember to select your printer again or your orders may not print. From Reflux, go to "File" =>"Change Printer" then select your printer from the list and click "save"
